GENERAL MOUNTING

LED neon flex can be fastened to surfaces using appropriate accessories available from distributor. Please refer to data sheets or contact technical support for a copy. The use of glues and resins as fixing agents should be avoided. Use of glues and resins may invalidate the warranty of the product unless its use is agreed in writing by distributor as part of a detailed project specification.

The images indicate one type of fixing available in the accessories range. The different fixings serve obvious purposes, however when in doubt technical support should be contacted.

Quantities of accessories and fixings are dependent on the type and its effect on the variant it's being used with. Care should be taken to ensure drooping is avoided, and to ensure that is fastened adequately to avoid stresses on itself.

Press the flex light into mounted aluminum channel in one direction.

Incorrect installation like below picture could lead to light failure.

Do not bend against light terminals; otherwise it will lead to failure of connector waterproof.

Ensure the feeding cable not bear force, keep the head 10mm in natural loose.

Mount the cable junction in hermetic enclosure like waterproof junction box in outdoor application.

INSTALL

Attention

1. Correct bending way

Intallation

1. Installation of clip

Fix the clips and aluminum profile via the screws

⚠ Suggestion: 2pcs clips per meter.

2. Installation of Neon

Simultaneously install the neon from both ends

3. Installation of Neon

Should use tools to assist when remove the neon

Cutting/Soldering/Intall end cap

1. Cut the neon to be required length

⚠ The minimum cutting unit is based on the cutting mark.

2. Cut the side of neon, expose the soldering pad

3. Solder the cable onto the PCB

4. Put the wire into and inject glue into the end cap

⚠ The amount of glue is about 1/3-1/2 of end cap

5. Push the end cap to wrap end of neon

⚠ After the glue is injected, the neon needs to be laid flat for 2 hours to before other process.

6. Apply gel around the tail of neon and install the end cap

⚠ After the glue is injected, the neon needs to be laid flat for 2 hours to before project process. Glue will complete dry after 24hours.
