

RIBBON WHITE

FEATURES:

RIBBON WHITE COB Strip Light is designed for those who demand superior brightness, consistency, and energy efficiency. It is perfect for a variety of indoor applications. Featuring advanced COB technology, our strip light offers light with no dark spots, providing a smooth and uniform illumination. The strip light is flexible and can be easily cut to size. 100,000 Switching cycles. Min. Bending Diameter 60mm. Control mode: ON/OFF, DALI, Phase Cut, 0/1-LOV.

TECHNICAL DETAILS

Power : 7W/M
 Voltage : DC24V
 CRI > 90
 Led Qty : 480 Chip 's/M
 Cutting Length : 50mm
 Length/Reel : 5M
 Strip Width : 4mm
 Working Temperature : -20~50°C
 Storage Temperature : -30~80°C
 Voltage Range : 23 ~25V dc
 Reverse Voltage : 25V dc

FIELDS OF APPLICATION

Retail
 Reception areas
 Galleries hotels
 Living spaces

PRODUCT CHART

Product Code	Rg	Max. Power (W/M)	CCT	Luminous Flux
850020780	96	7	2700K	525
			3000K	560
			4000K	630
			5000K	680
			6000K	730
			6500k	755

Strip Light Assembly and Safety Information :

Installation must be carried out under observation of the relevant regulations and standards. The LED modules are designed for operation within a casing or luminaire. Installation must be carried out in a voltage-free state (i.e. disconnection from the mains).

The following advice must be observed; non-observance can result in the destruction of the LED assembly modules, fire and/or other hazards.

- The LEDLine Flex COB must be operated with a constant-voltage (CV) LED converter.
- Operation only with power supply units that feature the following protection:
 - Short-circuit protection
 - Overload protection
 - Overheating protection
 - SELV (Safety Extra Low Voltage)
- It is imperative to pay attention to the correct polarity when connecting to the LED driver. Wrong polarity may destroy the strip.
- The maximum output of the power supply must be observed.
- Exceeding the max. operating voltage leads to an overload on the LED module. This may result in a reduction of service life or even destroy the LED module.
- The maximum recommended length of a single unit to be driven in series is 5 meters (one complete reel) to ensure consistent output along the complete length. It is possible to increase the total length driven from a single driver by adding additional lengths connected in parallel.
- LED modules and all PCB components must not be subjected to any undue mechanical stress.
- The LEDLine Flex modules must not be operated in rolled-up conditions.
- The circuit path must not be damaged or interrupted.

- During installation the bending radius must not fall below 60 mm. On sharp edges the LEDLine Flex COB IP67 may only be bent at a position where no electronic components or solder parts are mounted. The module can be damaged if it is bent in a crosswise or twisted direction (prevent shear or pull-off forces).
- LEDLine Flex modules are suitable only for mounting on rigid and solid surfaces. The module must not be mounted on flexible substrates as the LED module would be damaged when the substrate bends.
- LEDLine Flex IP67 modules must be installed, handled and bent at a module temperature of between 10 °C to 50 °C.
- Do not use the IP67 LEDLine Flex module in the following environments:
 - Locations containing corrosive inflammable or oxidizing gases such as Cl, H₂S, NH₃, SO₂, NO_x, sulfur, etc.
 - Direct exposure to salt water or organic solvents
 - Exposure to direct sunlight
 - Highly airtight locations
 - Locations subjected to the effects of electric or magnetic fields, intense (continuous) vibration or shock.

Pluxb luminaires are developed with globally recognized and tested components suppliers, however as per international standards tolerance in initial flux and connected load is at ±5%. Unless stated otherwise, the values apply to an ambient temperature of 25°C

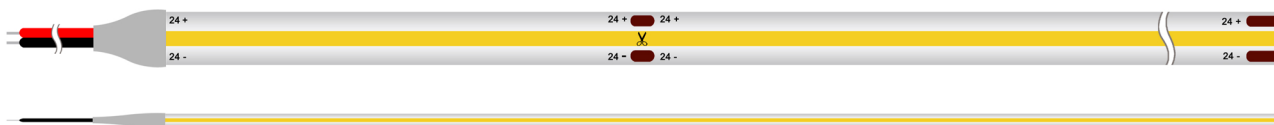

Some Important Highlight points :

- ▶ IP20 : Do not press the surface of LED, Pay attention to damp -proof and dustproof.
- ▶ IP65 : Do not use in strong water waves environment, Can be applied to rainy environment.
- ▶ IP67 : Resist strong water waves impact, Do not apply to underwater environment for a long time.
- ▶ IP68 : Can apply to underwater do not deeper than 1m, No direct sunlight.

- Do not tie a knot.
- Do not winding.
- Do not twist.
- Do not cut when it is working,
- Recommended the continuous working time do not exceed 12 hours daily.
- Operating temperature : 20°C~+50°C
- Storage temperature : 0°C~+60°C
- Operated by professionals.
- Pay attention to the application environment.
- IP Level will change after cutting.
- Do not pull and crash.
- Power supply must be connected to ground (GND)
- The minimum bending diameter 60mm
- Power supply retain > 20%
- Note the positive and negative poles.

- ▶ For cutting LED strip operation, it is necessary to use the standard accessories e.g. DC wire, end-cap, front-cap, adhesive, etc.), and according to the correct cutting and connecting method for the installation.

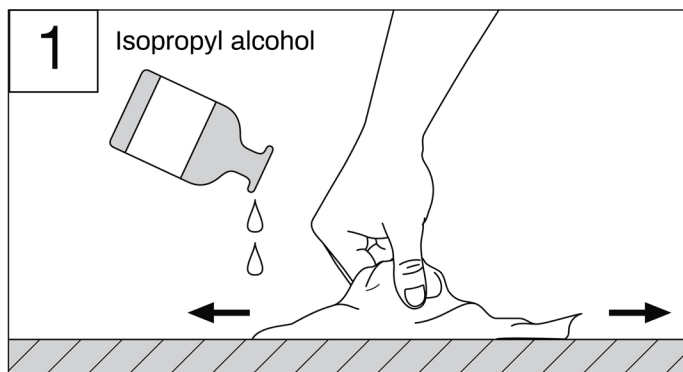

Installation Manual For strip light

Safety Information

- Wear anti-static wristbands with earthing terminal or anti-static gloves to handle the products.
- The LED module itself and all its components may not be mechanically stressed.
- Care should be taken to avoid damage to the conducting paths on the circuit board of the LED strip during assembly.
- Do not connect or disconnect the LED strip when the circuit is powered.
- Do not connect the LED strip to the power supply while it is in the packing.
- Please read the installation guide carefully for detailed installation planning.

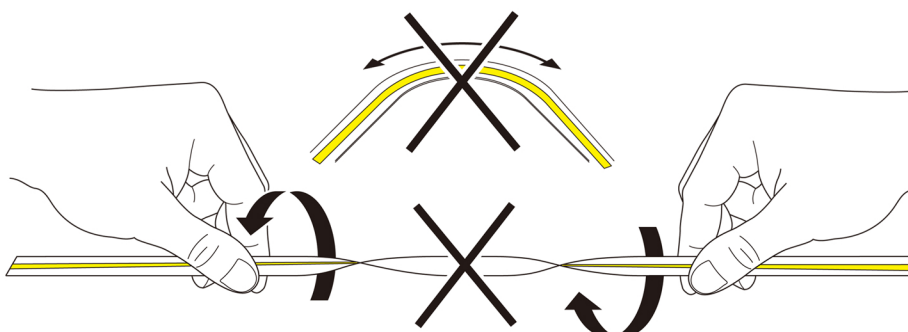

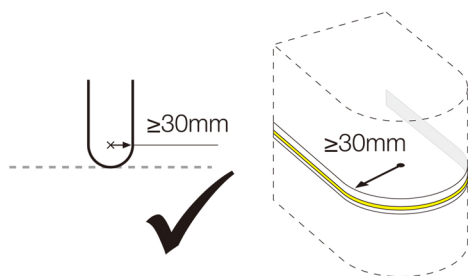

Mounting on surface

Do's and Don'ts

Minimum Bending Radius

Do not twist

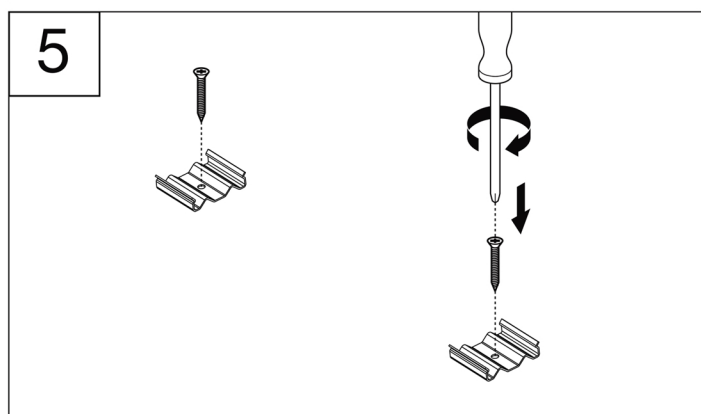

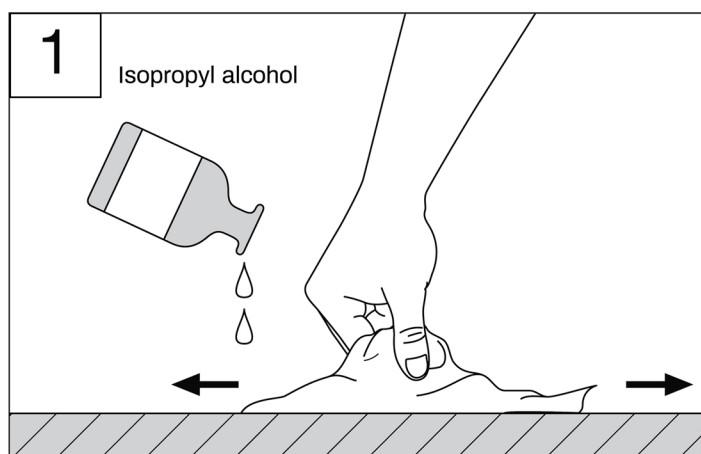

Pluxb luminaires are developed with globally recognized and tested components suppliers, however as per international standards tolerance in initial flux and connected load is at $\pm 5\%$. Unless stated otherwise, the values apply to an ambient temperature of 25°C

Mounting on U-channel

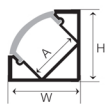

U-channel for Indoor
